

# Sonia Check: Hepatitis B

## THINGS TO NOTE

- Hepatitis B vaccinations do not guarantee lifelong immunity. Each student should be treated as a unique case and medical consultation is strongly recommended
- Hepatitis B checks can only be cleared based on serological proof of Immunity
- Serology should be undertaken within the last 12 months from course commencement
- There are recommended dosage intervals (0, 1, 6 mths) and all doses must be completed within 6 months, with an additional gap of 2 months before final serology is performed
- Any vaccinations administered outside of the 8 month timeframe cannot be accepted
- Students in the first year of their course who have received at least two recent doses of an acceptable brand of hepatitis B vaccine are eligible for placement. They must ensure that they provide serological proof of immunity by the end of their first year
